

Becoming a Meta Tech Provider

Direct route for **Sendero** (sendero.pro) — sole proprietor, Mexico

Prepared 14 July 2026 · Based on Meta's Partners documentation (updated 21 May 2026) and current Business Verification rules. Meta changes these flows often — reverify the linked pages before submitting.

This guide takes you from zero to an approved Meta Tech Provider able to offer WhatsApp AI agents to client businesses. You keep the Meta relationship, your clients' WhatsApp assets, and the margin. There are two parallel tracks — **Business Verification** (the long pole, start today) and the **developer app + App Review**. Everything downstream is gated on verification passing, so it leads.

The single most important rule for you as a sole proprietor: pick *one* exact legal name and use it identically everywhere — Meta Business Manager, your INE/passport, and your SAT Constancia de Situación Fiscal. Over 80% of sole-proprietor rejections are a name mismatch, not missing company registration. "Sendero" is your *brand and website*; your *legal business name* in Meta must match your personal name on your tax documents.

0 What you're applying for (and why "Tech Provider")

Meta has three partner tiers. You want **Tech Provider** — the entry tier that still lets you offer the full WhatsApp Business Platform to client businesses:

CAPABILITY	SOLUTION PARTNER	TECH PROVIDER ← YOU	TECH PARTNER
Offer full WhatsApp services to clients	Yes	Yes	Yes
Has a credit line / bills clients for API usage	Yes	No	No
Requires only a verified business portfolio	No (lengthy)	Yes	Upgrade
Is a Meta Business Partner	Yes	No	Yes

As a Tech Provider, each client adds their own payment method and Meta bills *them* for conversations; you bill separately for the agent. No credit line needed — which is exactly why this tier only requires a **verified business portfolio**, not the lengthy Solution Partner process. You can upgrade to Tech Partner later for the Meta Business Partner badge.

1 Prepare your documents (do this first)

As a Mexican *persona física* you select the "sole proprietorship / not officially registered / represented by an individual" business type. Meta then expects a government ID plus supporting proof — not articles of incorporation. Gather these and confirm every name and address matches **character for character**:

DOCUMENT	WHAT IT IS / WHERE TO GET IT	MUST SHOW
Government photo ID	Your INE / credencial para votar or passport . Clear, uncropped, all four corners visible, not blurry.	Full legal name; photo; must be valid (not expired).
Constancia de Situación Fiscal (CSF)	Your SAT tax status certificate — the key Mexican document. Download from sat.gob.mx with your RFC + contraseña or e.firma. Ideally register as <i>persona física con actividad empresarial</i> .	Legal name, RFC, and domicilio fiscal (registered address).
Proof of address	Recent (last ~90 days) utility bill (CFE, agua) or bank statement (<i>estado de cuenta</i>). Meta rejects self-filled or unsigned documents.	Same legal name + same address as the CSF.

NAME DECISION — DO THIS BEFORE ANYTHING ELSE

Your CSF and INE show your **personal legal name**, not "Sendero." So in Meta Business Manager, the **Legal business name** field must be your personal legal name exactly as it appears on those documents (including every surname, accents, and spacing). You can still set "Sendero" as the public/display name and use `sendero.pro` as the website — but the legal field is what gets matched against documents. Decide the exact string now and copy-paste it everywhere to avoid typos.

2 Create & verify the Business Portfolio

- 1 Go to business.facebook.com and create a **Business Portfolio** (or sign into your existing Meta Business Suite account).
- 2 In **Business Settings** → **Business Info**, enter your legal name, address, and phone **exactly** as they appear on your CSF. Enter `sendero.pro` as the website.
- 3 Verify your **domain**: Business Settings → Brand Safety → Domains → add `sendero.pro` and confirm ownership via the DNS TXT / meta-tag / HTML-file method (you control DNS, so the TXT record is easiest).
- 4 Make sure `sendero.pro` has a **public page listing a business email and phone** that match your portfolio — Meta reviewers visit the site.
- 5 Start **Business Verification**: Business Settings → Security Center (or Business Info) → **Start Verification**. Select the sole-proprietor / individual business type.
- 6 Upload your ID + CSF + proof of address. Submit and monitor the status inside Business Settings.

Typical turnaround: a few days to ~2 weeks. If Meta asks for more documents, respond with the same consistent name and address — never introduce a new spelling or a newer address.

3 Create the developer app (run in parallel with Step 2)

- 1 Register at developers.facebook.com and create a **Business-type app**.
- 2 Add the **WhatsApp** product to the app and link the app to your Business Portfolio.
- 3 Using the provided **test number**, wire up the **Cloud API**: configure a webhook (subscribe to `messages`), receive an inbound message, and send a reply. Prove your AI agent answers end-to-end.
- 4 Keep this demo working and recorded — it is exactly what App Review wants to see.

Tokens: as a Tech Provider you use **business tokens** (scoped per client), obtained by exchanging the code returned when a client completes Embedded Signup — not long-lived system tokens.

4 Build client onboarding (Embedded Signup)

This is how a client connects *their own* WhatsApp number to your app so you can message on their behalf.

- Implement **Embedded Signup** — the flow launched from your site/portal that auto-generates the client's WhatsApp assets and authorizes your app.
- Prefer **Hosted Embedded Signup** if you'd rather not host the flow code yourself — simpler to stand up.
- On completion you receive a code → exchange it for a client-scoped **business token** → send/receive for that client.

5 Submit App Review — request Advanced Access

Before you can onboard real clients, your app must pass App Review with **Advanced Access** for the permissions your agent needs:

PERMISSION	WHY YOU NEED IT
<code>whatsapp_business_messaging</code>	Send & receive messages for clients — the core of your AI agent.
<code>whatsapp_business_management</code>	Manage clients' WhatsApp Business Account settings and message templates.

Without Advanced Access approved, these permissions **do not appear** in the Embedded Signup flow, so clients can't grant them — and `whatsapp_business_management` calls against WABAs you don't own return error code `200` . App Review is where your working demo from Step 3 earns the approval, so record a clear screencast of the full message flow.

6 Go live & onboard clients

- 1 Publish the app. Onboard clients via Embedded Signup.
- 2 Each client adds their own payment method; Meta bills them for conversations, you bill for the agent + setup.
- 3 Have clients complete their *own* Business Verification for higher messaging limits and Official Business Account status.
- 4 Later, if you want the Meta Business Partner badge + accelerator program, apply to **upgrade to Tech Partner**.

Pre-submission checklist

- ☐ Chosen one exact legal name string; it matches INE/passport + CSF + Business Manager legal-name field.
- ☐ CSF downloaded, address current, régimen ideally "actividad empresarial".
- ☐ Proof of address ≤ 90 days old, same name & address as CSF, signed/official (not self-filled).
- ☐ ID scan sharp, uncropped, unexpired, all corners visible.
- ☐ `sendero.pro` domain verified in Business Portfolio via DNS TXT.
- ☐ `sendero.pro` shows a public business email + phone matching the portfolio.
- ☐ Business-type developer app created, WhatsApp product added, linked to portfolio.
- ☐ Cloud API test-number demo answers a message end-to-end (screenshot saved).
- ☐ Embedded Signup (or Hosted ES) implemented for client onboarding.
- ☐ App Review submitted requesting Advanced Access for both WhatsApp permissions.

Top rejection reasons to avoid

- **Name mismatch** — Business Manager name $\neq$ document name (missing surname, accent, or using "Sendero" where the legal name belongs). #1 cause.
- Address on proof-of-address is outdated or differs from the CSF.
- Only one document submitted when Meta expects ID *plus* supporting proof.
- Blurry, cropped, or expired ID scan.
- Website has no matching public contact info, or domain not verified.
- Submitting App Review before the demo actually works, or without a clear screenshot.
